React-Express App: Big Picture Overview

Back-End Web Application

- Bower, NPM, Node, Gulp and Browserify form scaffold
- Express responds to requests from front-end with isomorphic code
- MongoDB persists data
- Mongoose streamlines database interactions

Front-End Website

- React displays content quickly
- React bootstraps easily to server-generated HTML code
- AJAX requests via jQuery
- Browserify used to manage dependencies

Taking it Further

Test React code
with Jest

express

Test Express code
with Supertest

Implement user
authentication
with Passport.js

Add prices to your
items and calculate
the total cost
