CYBER SECURITY CONSULTANT

Report - the final product

Overview

Understanding risk

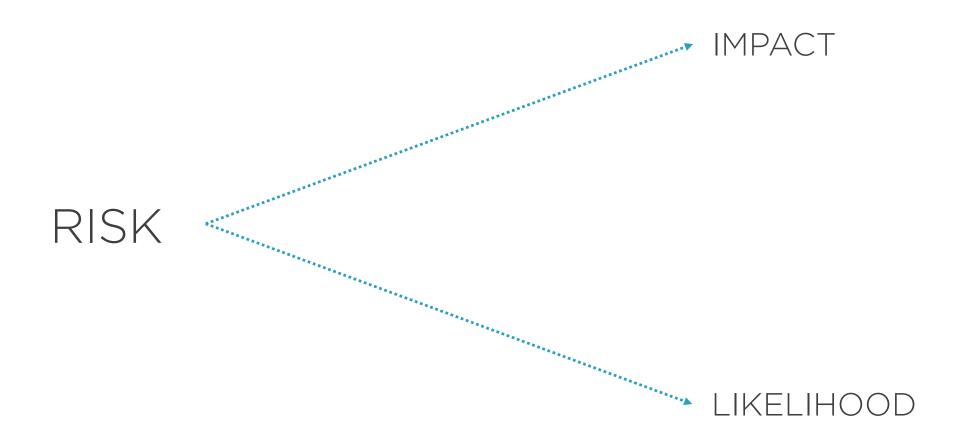

Proposing recommendations

What to include in your report

Risk

IMPACT

The consequences if attack is successful

- Which networks can be accessed?
- What is the nature of the attack?
- Which servers would be exposed?
- What kind of data is being transmitted?
- How many users would be impacted?
- What level of access an attacker would have?
- How critical is the environment for the business?

LIKELIHOOD

How likely could someone exploit the vulnerability?

- What is the nature of the attack?
- How long would an attacker take?
- What is the required skill level?
- Where was the network found?
- What is the nature of the company?

Client logo

Confidentiality note

Legal Information

Non-liability statement

Document classification: confidential

Executive Summary

Brief description of the project

Scope of the tests

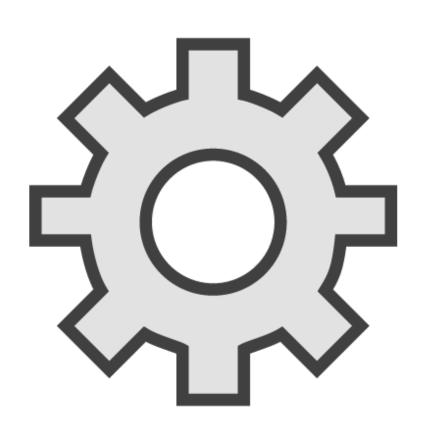

When the tests were performed

Summary of findings in a non-tech language

Risks to confidentiality, integrity, and availability

Technical Findings

Sectioned by vulnerability

- Description of the finding
- Impact
- Likelihood
- Risk
- Recommendation

Weak Wireless Encryption - WEP

Description:

The WEP protocol is considered insecure due to the fact the encryption key can be easily retrieved through analytical attacks. This protocol was discontinued in 2003. If exploited, this vulnerability could expose internal servers, including the HR and Payroll servers.

Vulnerable Networks: GBM Cameras WiFi

Affects: Confidentiality, Integrity, Availability

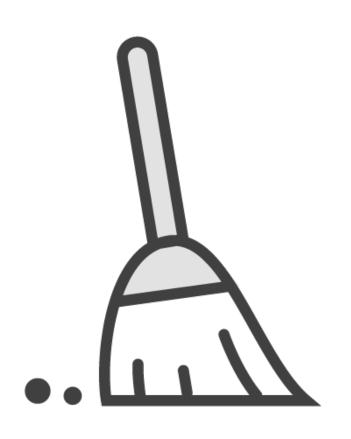

Recommendation:

It is recommended to upgrade the wireless protocol to WPA2 with a strong encryption key

Impact: HIGH | Likelihood: HIGH | Risk: HIGH

Proposing Recommendations

Understand the technical issues

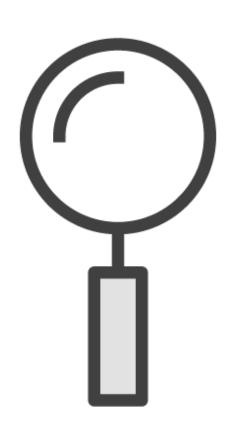

Understand the client environment

Research best practices

Propose improvements

Appendix

Proof of findings

- Screenshots
- Data found (obfuscated)
- Additional information

What <u>NOT</u> to Include in a Report

Sensitive data

- Passwords
- Confidential documents
- Network traffic dumps

Summary

No single answer for reporting

Importance of executive summary

Detailed technical finding

Recommendations based on client environment

What to not include in a report
