Component Concepts

Containers	Actions	Reducers
Sagas	Routes	Selectors

Container Components

Attempts to contain awareness of concepts like actions, redux, and routes. This results in simpler presentation components that are easily portable to a different area of the app.

Redux-saga

Is unobtrusive - intercepts actions

Use generators to make async work easy

Has helper functions for side effects

Is redux middleware

Reselect

Avoids unnecessary storing of computed data

Easy to chain

Only recomputes if dependency was changed

Routes

User can navigate forwards and backwards

Deep linking in the app is supported

Packages that contain code per route
