Building a Test-Ready React Application with ES6 and Express
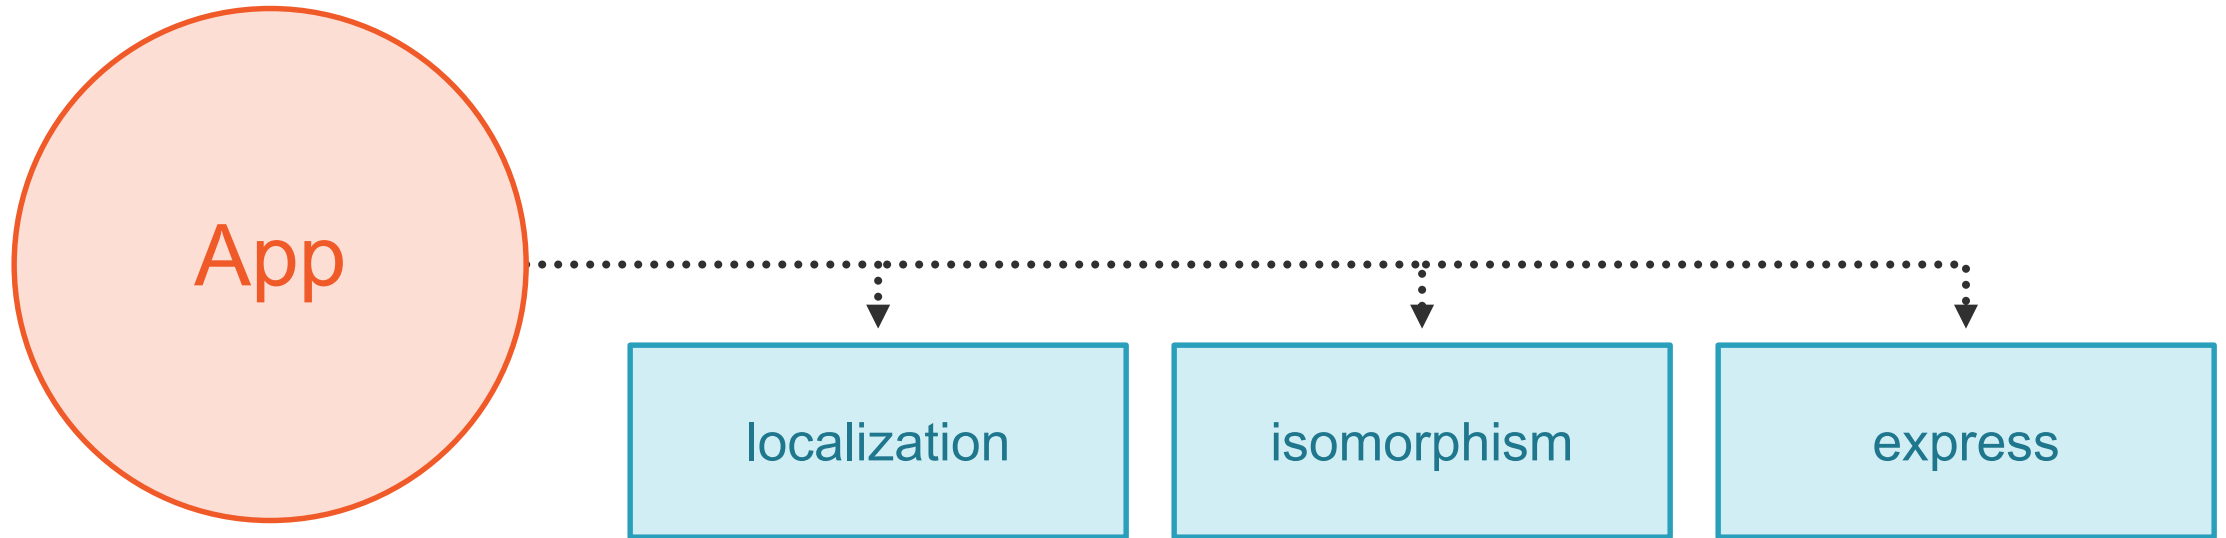

Daniel Stern

Github – danielstern | @danieljackstern

Application Overview

App

localization   isomorphism   express

Non-trivial isomorphic shopping cart
application with currency localization

Babel processes **ES6** and **JSX** via **Gulp**

Express responds to HTTP requests from the browser by serving our application

React runs on the front and back end, facilitating everything the user sees and interacts with and minimizing performance issues

Before We Begin

Application shares numerous technologies with app from Build a Full Stack with React and Express
Pluralsight, Daniel Stern

If you have course files, you can skip this chapter by checking out the appropriate Git Branch

Demo

Constructing the App

Summary

Fully functional cart application

total and currency localization with React

Real-world dependency scenarios
